TUAN TRAN

Senior Frontend Developer

Hanoi, Vietnam • 0346 731 336 • tmtuanyd@gmail.com • github.com/tmtuanyd
Hanoi University of Science and Technology • Automatic Control - Very Good • GPA 3.2/4.0

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years of experience architecting high-performance SaaS, enterprise, and Web3 applications. Proven track record of leading frontend initiatives, establishing scalable design systems, and optimizing core web vitals to deliver exceptional user experiences. Adept at bridging the gap between complex product requirements and robust technical solutions, while mentoring engineering teams to elevate code quality and development practices.

TECHNICAL SKILLS

Language: TypeScript, JavaScript, HTML5, CSS3

Frontend: React, Next.js, Redux Toolkit, TanStack Query, React Hook Form, Tailwind CSS, HeroUI, Material UI

Backend: Supabase, PostgreSQL, Next.js API Routes, REST APIs, GraphQL, NodeJs, Python

Cloud & Integrations: AWS S3, Lambda, MediaConvert, Firebase Cloud Messaging, Cloudflare, Stripe, Resend

Architecture: Frontend Architecture, Design Systems, Performance Optimization, Accessibility, Responsive Design, SSR, ISR,

Testing: Playwright, Jest, React Testing Library, Cucumber

Tools: Git, GitHub Actions, Vercel, Contentful, OpenAI API, Solana Web3

PROFESSIONAL EXPERIENCE

Support Dept. Oct 2025 - Present | Remote, Australia

Senior Frontend Engineer

- Architected the full-stack foundation for new SaaS platforms from scratch, making critical technical decisions on the stack, state management, and database schema.
- Established engineering best practices, including code review guidelines, automated testing, and CI/CD pipelines, improving overall code quality and deployment reliability.
- Collaborated directly with stakeholders to translate business requirements into technical specifications, ensuring timely delivery of product milestones.

Featured Projects

InsureVault (Multi-tenant Insurance SaaS)

Insurance SaaS platform serving administrators, brokers, insurers, photographers, and end customers across web and mobile applications.

Team Size: 8 members (4 Developers)

Role: Senior Frontend Engineer

Client: Netherlands

Tech Stack: React, Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL, AWS S3, Firebase, Stripe, Cloudflare, Resend, OpenAI.

- Architected a multi-tenant frontend supporting dynamic subdomains and 5 distinct user roles (administrators, brokers, insurers, photographers, clients).
- Orchestrated the integration of 6 third-party services (Stripe, AWS S3, Firebase, Cloudflare, Resend, OpenAI) to automate document processing, payments, and notifications.
- Designed reusable application architecture while implementing authentication, role-based access control, and backend APIs to support scalable product growth.

AIntivirus Website (Web3 Brand & Commerce Platform)

Official multi-product web platform for AIntivirus - content, NFT-gated media, merch commerce, and trading services with Solana wallet integration.

Team Size: 4 members (2 Developer)

Role: Senior Frontend Engineer

Client: US

Tech Stack: React, Next.js, TypeScript, Tailwind CSS, HeroUI, TanStack Query, Zod, Contentful, Solana Web3.js, Mux, Framer Motion, GraphQL

- Engineered a secure Web3 authentication flow and NFT-gated content system with Solana wallet integration.
- Built a shared application supporting multiple business domains (marketing, e-commerce, trading services) while maintaining a reusable frontend architecture.

ANSYS ICA GmbH Dec 2022 - Sep 2025 | Remote, Germany

Frontend Engineer

- Drove frontend modernization across multiple enterprise applications, establishing coding standards and architectural patterns that elevated team efficiency.
- Collaborated seamlessly with distributed, cross-functional teams (Product, Design, QA) across different time zones to deliver robust software in Agile environments.
- Pioneered a shared component library that reduced code duplication by 30% and accelerated the onboarding of new features across distributed teams.
- Mentored junior developers and conducted technical interviews, contributing directly to the growth and skill development of the frontend team.

Featured Projects

Klarland Meet (Virtual Collaboration Platform)

A virtual collaboration platform enabling organisations to host online meetings, digital showrooms, and collaborative workspaces.
Team Size: 10 members (5 Developers)

Role: Frontend Engineer

Client: Germany

Tech Stack: React, Redux, Socket.IO, Jitsi, Three.js, styled-components, i18next, REST APIs, Jest, Playwright

- Built real-time collaboration experiences supporting virtual meetings, shared workspaces, and interactive digital showrooms.
- Integrated Jitsi, Socket.IO, and Three.js to synchronize communication and collaboration across multiple connected users.
- Ensured high-quality localization and performance standards required for the European/German market.

Datameer (Cloud-native Data Transformation Platform)

A platform enabling data teams to prepare, transform, govern, and deliver analytics-ready data through visual workflows.
Team Size: 12 members (6 Developers)

Role: Frontend Engineer

Client: US

Tech Stack: React, TypeScript, REST APIs, MUI, Redux, GrapQL, dnd kit, Playwright, Cucumber

- Developed enterprise data management interfaces for workflow automation, analytics, and reporting within a cloud-native platform.
- Built reusable React modules and GraphQL integrations that simplified feature development across multiple product areas.
- Strengthened application quality through automated testing, performance optimization, and continuous frontend refactoring.

Webshop 3.0 (MIAB) (Multi-tenant E-commerce Platform)

A multi-tenant SSR e-commerce platform powering multiple branded marketplaces from a shared frontend architecture.
Team Size: 10 members (4 Developers)

Role: Frontend Engineer

Client: Netherlands

Tech Stack: Preact, React, Redux, Razzle (SSR), Auth0, Stripe, GraphQL, MUI, Taiwind

- Engineered a dynamic subdomain routing system using Server-Side Rendering (SSR), allowing multiple brands to operate on unique storefronts.
- Implemented authentication, GraphQL integrations, and server-side rendering to deliver scalable and SEO-friendly experiences.

VMO Holdings Jun 2021 - Dec 2022 | Hanoi, Vietnam

Frontend Developer

- Delivered responsive and high-performance web applications for international clients, consistently meeting tight project deadlines.
- Enhanced application maintainability by refactoring legacy code and implementing clean, modular frontend architecture.

Featured Projects

Swyft (Customer-facing Recommendation Platform)

A recommendation platform that guides users through complex product selection journeys using dynamic questionnaires.

Team Size: 7 members (2 Developers)

Role: Frontend Engineer

Client: Ireland

Tech Stack: React, TypeScript, Material UI, Formik, TanStack Query, Monorepo, Stripe, Google Maps API, dnd kit, GTM

- Architected the frontend for a multi-role system (Superadmin, Admin, Customer) with distinct workflows and access controls.
- Developed a dynamic Questionnaire Builder for Admins to configure complex logic, outcomes, and product mappings.
- Built the customer-facing recommendation engine that processes user inputs to suggest optimal energy products, integrated with a seamless payment flow.

Ilico Software Dec 2019 - Jun 2021 | Hanoi, Vietnam

Frontend Developer

- Built modern web applications using React and Next.js, focusing on delivering responsive and user-centric interfaces.
- Contributed to feature delivery and application performance, ensuring high code quality through thorough testing and peer reviews.
- Collaborated effectively with distributed engineering teams throughout the full software development lifecycle.

Featured Projects

Ilico Business Management Web (Internal ERP System)

Business operations system covering employees, contracts, projects, activities, leave, products, and partner organizations.

Team Size: 5 members (5 Developers)

Role: Frontend Engineer

Client: France

Tech Stack: React, JavaScript, Material UI, Redux, i18n, Google Maps API, Socket.IO

- Built reusable management screens and complex data-entry workflows that streamlined internal business operations
- Developed API-integrated modules within a cross-functional team, ensuring smooth data synchronization across different departments.
- Implemented multi-language support (i18n) and location-based features using Google Maps API.
