TUAN TRAN

Frontend Developer

Hanoi, Vietnam • 0346 731 336 • tmtuanyd@gmail.com • github.com/tmtuanyd
Hanoi University of Science and Technology • Automatic Control - Very Good • GPA 3.2/4.0

PROFESSIONAL SUMMARY

Senior Frontend Engineer with nearly 7 years of experience building scalable SaaS, enterprise, and customer-facing web applications using React, Next.js, and TypeScript. Experienced in leading frontend development, designing maintainable architectures, and collaborating directly with Product Owners and cross-functional teams in fully remote international environments. Comfortable working across the stack with Next.js, Supabase, PostgreSQL, AWS, Firebase, and Stripe to deliver reliable production systems from design to deployment.

TECHNICAL SKILLS

Frontend
React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, MUI, HeroUI, Boostrap, SCSS

State Management
Redux Toolkit, React Query, Context API, React Hook Form, Formik

Testing
Jest, React Testing Library, Playwright, Cucumber

Architecture
Frontend Architecture, Component Design, Design Systems, Responsive Design, Accessibility, Performance Optimisation, SSR, CSR, ISR, Code Splitting, Lazy Loading

Backend
Next.js API Routes, Supabase, PostgreSQL, REST APIs, GraphQL, Authentication, Row-Level Security

Cloud & Services
AWS S3, AWS Lambda, Firebase Cloud Messaging, Stripe, Cloudflare Turnstile, Resend

PROFESSIONAL EXPERIENCE

Support Dept. Oct 2025 - Present | Remote, Australia

Support Dept. is an Australian software development company delivering cloud-based products for international clients. Working as the primary frontend engineer responsible for designing, developing, and maintaining production SaaS applications while collaborating directly with international stakeholders in a fully remote Agile environment.

- Lead frontend implementation from technical planning through production deployment.
- Collaborate directly with Product Owners to analyse business requirements and translate them into scalable technical solutions.
- Design reusable frontend architecture with a strong focus on maintainability, scalability, and long-term product evolution.
- Contribute beyond frontend development by implementing backend APIs, database logic, authentication, and cloud integrations.
- Work closely with backend engineers, mobile developers, designers, and QA engineers to deliver high-quality software.

ANSYS ICA GmbH Dec 2022 - Sep 2025 | Remote, Germany

ANSYS ICA GmbH is a German software engineering company delivering enterprise web applications and digital products for clients across Europe. Worked as a Frontend Engineer within cross-functional Agile teams, collaborating with international clients to build scalable, production-ready applications across multiple industries.

- Developed modern web applications using React, Next.js, and TypeScript for enterprise and SaaS products.
- Collaborated with Product Owners, UI/UX designers, backend engineers, and QA teams throughout the software development lifecycle.
- Built reusable UI components and scalable frontend architectures to improve maintainability and development efficiency.

- Participated in technical discussions, code reviews, performance optimisation, and production releases.
- Contributed to multiple enterprise products.

VMO Jun 2021 - Dec 2022 | Hanoi, Vietnam

Vietnamese software outsourcing company delivering web and mobile products for international clients. Depending on project structure, I worked both within a frontend team and independently owned frontend delivery.

- Developed responsive web applications using React, TypeScript, and modern JavaScript.
- Built reusable UI components and implemented responsive layouts from Figma and design specifications.
- Integrated REST APIs and collaborated with backend engineers to deliver end-to-end product features.
- Improved application maintainability through reusable components, clean architecture.
- Worked within Agile teams, participating in sprint planning, daily stand-ups, code reviews, and production releases.

Ilico Software Dec 2019 - Jun 2021 | Hanoi, Vietnam

Ilico Vietnam is the Vietnam engineering center of a France-based software company specializing in custom digital products and enterprise software solutions. Working closely with the headquarters and distributed engineering teams, the company develops scalable web applications for international clients across industries including collaboration, e-commerce, healthcare, and business management.

- Developed modern web applications using React, TypeScript, and Next.js for international clients.
- Collaborated directly with product owners, designers, backend engineers, and QA teams in an Agile environment.
- Participated in feature planning, technical discussions, code reviews, and production deployments.
- Optimized application performance, maintainability, and cross-browser compatibility across multiple projects.

FEATURED PROJECTS

InsureVault

Insurance SaaS platform serving administrators, brokers, insurers, photographers, and end customers across web and mobile applications.

- Led frontend architecture and owned development of a multi-role SaaS platform built with React, Next.js, and TypeScript from feature design through production deployment.
- Designed reusable UI architecture, shared business components, and maintainable application structure that accelerated feature delivery across multiple product modules.
- Extended responsibilities beyond frontend by building Next.js APIs, designing Supabase database structures, implementing Row-Level Security (RLS), authentication, and server-side business logic.
- Integrated Stripe, AWS S3, Firebase Cloud Messaging, Cloudflare services, and Resend to deliver secure payments, media storage, notifications, and customer communication.
- Collaborated closely with backend, mobile, QA, and DevOps teams to define APIs, troubleshoot production issues, and continuously improve platform reliability and performance

Tech: React, Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL, AWS S3, Firebase, Stripe, Cloudflare, Resend

Klarland Meet

Klarland Meet is a virtual collaboration platform enabling organisations to host online meetings, digital showrooms, and collaborative workspaces with real-time communication.

- Developed scalable React architecture for real-time collaboration features including virtual meetings, shared workspaces, and digital showrooms.
- Integrated Jitsi, Socket.IO, and Three.js to build highly interactive meeting experiences with real-time synchronization across multiple users.
- Built reusable frontend modules and shared infrastructure supporting multilingual deployments and organization-specific customizations.
- Improved application quality by implementing automated testing strategies, optimizing rendering performance, and participating in architecture discussions and code reviews.
- Worked within an international Agile team, collaborating closely with backend engineers to evolve APIs and complex business workflows.

Tech: React, Redux, Socket.IO, Jitsi, Three.js, styled-components, i18next, REST APIs, Jest, Playwright

Datameer

Datameer is a cloud-native data transformation platform that enables data teams to prepare, transform, govern, and deliver analytics-ready data through visual workflows, SQL, and pipeline automation within Snowflake.

- Developed scalable React interfaces for enterprise data transformation, workflow management, and analytics operations.
- Designed reusable UI components and shared frontend modules to support complex, data-intensive business workflows.
- Collaborated with backend engineers to integrate REST and GraphQL APIs, ensuring reliable synchronisation of datasets, transformation jobs, and metadata.
- Expanded automated testing coverage by developing end-to-end test suites using Playwright and Cucumber, improving release confidence and reducing manual regression testing.
- Optimised application performance through lazy loading, component refactoring, and efficient client-side state management.

Tech: React, TypeScript, REST APIs, MUI, Redux, GrapQL, dnd kit, Playwright, Cucumber

Webshop 3.0 (MIAB)

Webshop 3.0 is a multi-tenant SSR e-commerce platform powering multiple branded marketplaces across different regions from a shared frontend architecture.

- Developed a modular Preact/React architecture supporting multiple brands and regional marketplaces from a shared codebase.
- Delivered core e-commerce experiences including faceted search, category navigation, product pages, shopping cart, checkout, wishlist, and customer accounts.
- Implemented tenant-specific configurations and feature flags to maximise code reuse while supporting brand-specific functionality.
- Improved application performance, SEO, and user experience through server-side rendering (SSR), code splitting, Progressive Web App (PWA) features, and API integration.

Tech: Preact, React, Redux, Razzle (SSR), Auth0, Stripe, GraphQL

AIntivirus Website — Web3 Brand & Commerce Platform

Official multi-product web platform for AIntivirus — content, NFT-gated media, merch commerce, and trading services (eSIM, gift cards, trade-in) with Solana wallet integration.

- Led frontend development of a large-scale Next.js platform spanning marketing content, e-commerce, trading flows, and Web3-gated media experiences.
- Built NFT/wallet unlock flows with Solana wallet adapters — connect, sign messages, and unlock gated videos and digital content via on-chain ownership verification.
- Delivered end-to-end commerce UX including product catalog, cart, checkout, and purchase tracking integrated with backend purchase APIs.
- Implemented trading product flows (eSIM, gift cards, device trade-in) with country-based catalogs, form validation, and payment request pipelines.
- Integrated headless CMS (Contentful) for blogs, podcasts, and privacy content, plus Mux for streaming video playback across media sections.
- Architected a scalable React/Next.js frontend with TypeScript, TanStack Query, Zod validation, and reusable UI systems for maintainable multi-section delivery.

Tech: React, Next.js, TypeScript, Tailwind CSS, HeroUI, TanStack Query, Zod, Contentful, Solana Web3.js, Mux, Framer Motion, GraphQL, OpenAI

Swfyft

Swyft is a customer-facing recommendation platform that guides users through complex product selection journeys using dynamic questionnaires, payments, mapping services, and personalized recommendations.

- Developed highly dynamic multi-step workflows featuring conditional business logic, advanced validation, and responsive user experiences.
- Delivered payment, mapping, and analytics integrations supporting customer onboarding and product recommendation journeys.
- Contributed to scalable frontend architecture while balancing independent feature ownership with collaborative delivery across engineering teams.
- Worked closely with backend services to deliver seamless end-to-end customer workflows.
- Supported production releases, troubleshooting, and continuous platform enhancements.

Tech: React, TypeScript, Material UI, Formik, TanStack Query, Monorepo, Stripe, Google Maps API
