Hanoi, Vietnam • Hanoi University of Science and Technology • Automatic Control - Very Good

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 7 years of experience building SaaS, marketplace, enterprise, and Web3 products. Frontend specialist in React, Next.js, and TypeScript; full-stack since 2025 with Node.js, Supabase, and PostgreSQL. Leads architecture across frontend, API, and database, and sets the performance, testing, and accessibility standards teams follow. Ships production AI features and works AI-first with Claude Code and Cursor, backed by review and tests. Mentors developers and works directly with founders.

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, HTML5, CSS3

Frontend: React, Next.js, Redux Toolkit, TanStack Query, React Hook Form, Zod, Tailwind CSS, Material UI, Three.js, Astro

Backend: Node.js, Fastify, Supabase (Auth, Edge Functions), PostgreSQL, REST, OpenAPI, GraphQL, Socket.IO

Cloud & Integrations: AWS S3, Lambda, MediaConvert, Firebase Cloud Messaging, Cloudflare, Stripe, Resend, Payload CMS

AI Integration: OpenAI API (GPT-4o vision, structured output, moderation, Assistants), prompt design, fail-safe AI pipelines

AI-assisted Engineering: Claude Code (custom subagents, enforcement hooks, skills), Cursor

Architecture: API Design, Multi-tenant SaaS, RBAC, Frontend Architecture, Design Systems, Core Web Vitals, WCAG AA, SSR

Testing: Playwright, Vitest, Jest, React Testing Library, Cucumber

Tools: Git, GitHub Actions, Vercel, Sentry, PostHog, Contentful, Solana Web3

PROFESSIONAL EXPERIENCE

Support Dept. Jul 2025 – Present | Remote, Australia

Senior Full-Stack Engineer

- Architected new SaaS platforms from scratch, choosing the stack, state management, and database schema.
- Set engineering standards across client products: code review guidelines, contract and regression tests, CI quality gates (coverage floors, bundle budgets), and CI/CD pipelines.
- Built an AI-assisted delivery workflow on Claude Code: hooks that block a commit or PR until a claim-by-claim review checklist is complete, and a reviewer agent that reviews changes without the author's context.
- Worked directly with founders and client stakeholders to turn requirements into specs and release plans.

Featured Projects

ReelWork (Video-first Hospitality Staffing Marketplace)
Australian marketplace where hospitality workers replace the CV with a short video profile, and venues discover candidates, message them, post shifts, and run rosters across web and mobile.
Team Size: 3 members (3 Developers)

Client: Australia

Tech Stack: Next.js 16, React 19, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Stripe, OpenAI, PostHog, Vitest, Playwright

- Cut ~1.4 MB of first-load JavaScript across 14 routes (/analytics −32%) by loading heavy modules on demand, and built CI bundle-size budgets and real-user Core Web Vitals tracking to keep pages fast.
- Hardened the video pipeline: an incident mode that keeps AI moderation running through an OpenAI outage, alerts when a reel cannot be screened, one shared OpenAI client, and upload stall detection.
- Secured the API with rate limiting, fail-closed access checks on candidate documents, sanitized error responses, and strict OpenAPI contract tests.
- Brought core flows to WCAG AA (keyboard access, focus management, 44px touch targets, AA contrast), refactored critical modules behind characterization tests, and held app test coverage at 80.8%+.
- Owned features end to end (UI, API routes, PostgreSQL) on a 600-route Next.js platform.

InsureVault (Multi-tenant Insurance SaaS)
Insurance SaaS for administrators, brokers, insurers, photographers, and customers on web and mobile.
Team Size: 8 members (4 Developers)

Client: New Zealand

Tech Stack: React, Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL, AWS S3, Lambda, MediaConvert, Firebase, Stripe, Cloudflare, Resend, Twilio, OpenAI

- Led development of a Next.js and Supabase platform with 5 role-based portals on dedicated subdomains (admin, client, broker,

photographer, insurer).

- Designed the 230+ route API layer around one auth and response contract, and extended it with Bearer-token auth so the mobile app shares the web API (79 routes).
- Implemented role-based access control and two-factor authentication across the 5 portals on Supabase Auth and Postgres row-level security.
- Automated policy operations with Supabase Edge Functions: email and SMS reminders (Resend, Twilio, TNZ), renewal notices, bulk email, push notifications, and delivery webhooks.
- Delivered the PhotoSecure media pipeline (presigned S3 uploads, video processing with AWS MediaConvert, Cloudflare image delivery) and Stripe billing (Checkout, webhooks, subscription auto-renewal).
- Introduced GPT-4o document extraction that reads scanned valuation forms and creates inventory items (descriptions, image numbers, policy references) as structured JSON, replacing manual item entry.

ANSYS ICA GmbH Dec 2022 – Jun 2025 | Remote, Germany

Frontend Engineer

- Modernized the frontends of several client applications and set the coding standards and architectural patterns the team followed.
- Delivered client projects for Germany, the Netherlands, and the US with distributed Product, Design, and QA teams across time zones in Agile sprints.
- Created a shared component library that cut code duplication by 30% and sped up feature delivery across teams.
- Mentored junior developers and ran technical interviews for the frontend team.

Featured Projects

Klarland Meet (Virtual Collaboration Platform)

Virtual collaboration platform enabling organizations to host online meetings, digital showrooms, and collaborative workspaces.
Team Size: 10 members (5 Developers)

Client: Germany

Tech Stack: React, Redux, Socket.IO, Jitsi, Three.js, styled-components, i18next, REST APIs, Jest, Playwright

- Developed real-time collaboration features for companies and their workspaces: video meetings and group chat (Jitsi, Socket.IO), live streams, and browser notifications.
- Shipped the admin tooling: a landing page builder with templates and preview, multi-language surveys with email triggers, a Q&A module, and analytics for events, stages, documents, and users.
- Extended the Three.js digital showroom with configurable stage UI, resizable overlays, and 3D object settings (AO maps, sprites, interactive buttons, startup animation).
- Implemented company and workspace management: registration, templates, private meetings, invites, and file uploads.

Datameer (Cloud-native Data Transformation Platform)

Low-code data transformation platform built natively for Snowflake (datameer.com), with visual workflows.
Team Size: 12 members (6 Developers)

Client: US

Tech Stack: React, TypeScript, REST APIs, MUI, Redux, GraphQL, dnd kit, Playwright, Cucumber

- Developed enterprise data-management interfaces for visual workflow automation, analytics, and reporting, including drag-and-drop workflow editing (dnd kit).
- Created reusable React modules and GraphQL integrations shared across product areas, with Playwright and Cucumber tests.

Webshop 3.0 for MIAB (Multi-tenant E-commerce Platform)

Multi-tenant SSR e-commerce platform powering multiple branded marketplaces from a shared frontend architecture.
Team Size: 10 members (4 Developers)

Client: Netherlands

Tech Stack: Preact, React, Redux, Razzle (SSR), Auth0, Stripe, GraphQL, MUI, Tailwind CSS, GA4, GTM

- Implemented SSR subdomain routing so each brand runs its own storefront from one shared frontend.
- Shipped an AI shopping assistant chat (multi-chat, message retry, reply feedback) and search by image.
- Delivered checkout and account flows: guest checkout, promo codes, postcode-based address suggestions and validation, order history with search and filters, product comparison, and account deletion.
- Added post-purchase flows: delivery tracking, returns, verified reviews, and back-in-stock alerts.
- Improved accessibility and SEO (touch targets, labels, contrast, Lighthouse) and added GA4 and GTM tracking.

VMO Holdings Jun 2021 – Dec 2022 | Hanoi, Vietnam

Frontend Developer

- Delivered responsive, high-performance web apps for international clients on tight release schedules.
- Refactored legacy code into a modular frontend architecture that made features easier to extend and test.

Featured Projects

Pipelyne by Swyft Energy (Lead-capture & Recommendation SaaS)
White-label SaaS (pipelyne.com): smart questionnaires that turn website visitors into leads with instant product recommendations.
Team Size: 7 members (2 Developers)

Client: Ireland

Tech Stack: React, TypeScript, Material UI, Formik, TanStack Query, Monorepo, Stripe, Google Maps API, dnd kit, GTM

- Architected the frontend for a multi-role system (Superadmin, Admin, Customer) with distinct workflows and access controls.
- Developed the admin Questionnaire Builder for configuring branching logic, outcomes, and product mappings without code.
- Built the customer recommendation flow with Stripe payment, white-labeled on each client's domain.
- Shipped the marketing websites for Swyft Energy (swyftenergy.ie, React) and Pipelyne (pipelyne.com).

Ilico Software Dec 2019 – Jun 2021 | Hanoi, Vietnam

Frontend Developer

- Built responsive, user-focused web apps with React and Next.js.
- Shipped features through peer review and testing with a distributed team across the full development lifecycle.

Featured Projects

Ilico (Business Management SaaS)
French/English business management SaaS (ilico.cloud) for employees, contracts, projects, leave, products, and partners; used by Silico, a Lyon-based software company.
Team Size: 5 members (5 Developers)

Client: France

Tech Stack: React, JavaScript, Material UI, Redux, i18n, Google Maps API, Socket.IO

- Developed reusable management screens and data-entry workflows for employees, contracts, projects, and leave.
- Integrated backend APIs across the modules, with real-time updates over Socket.IO.
- Implemented i18n and location-based features with the Google Maps API.

Freelance Apr 2025 – Present | Remote

Senior Full-Stack Engineer (Freelance)

Featured Projects

Lead Visibility Tool (SEO Ranking Tracker)
Private app for LeadGenerators Digital tracking each prospect's monthly Google rank for key phrases, replacing a spreadsheet.
Team Size: 1 developer (spec to production)

Client: United Kingdom

Tech Stack: React, Vite, TypeScript, Tailwind CSS, Fastify, Supabase (PostgreSQL, RLS, pg_cron), DataForSEO API, Vitest, Render

- Shipped in under a month: React + Vite frontend, a Fastify API, and Supabase with row-level security.
- Integrated DataForSEO to check the top 100 Google results per phrase, reusing 7-day results so repeat checks cost nothing.
- Kept rankings accurate after Google started wrapping result links, matching each result by its displayed site address.

Phoenix (Health-tech Brand & Store)
Website and store for a health-tech brand: a smart ring, blood testing, and personalized health protocols.
Team Size: 2 members (2 Developers)

Client: US

Tech Stack: Next.js 15, React 19, Redux Toolkit, Contentful, Tailwind CSS, Framer Motion, React Hook Form, ImageKit

- Led frontend development: three homepage generations, product detail pages, and campaigns such as Black Friday.
- Built the assessment quiz and result page that recommends a personal health protocol, plus a "help me decide" modal.

AIntivirus Website (Web3 Brand & Commerce Platform)
Multi-product Web3 platform: content, NFT-gated media, merch commerce, and Solana trading services.
Team Size: 4 members (2 Developers)

Role: Senior Frontend Engineer

Client: US

Tech Stack: React, Next.js, TypeScript, Tailwind CSS, HeroUI, TanStack Query, Zod, Contentful, Solana Web3.js, Mux, GraphQL

- Built the content hub and new homepage: blog, stories, and podcast pages with a video player, search, and recommendations from Contentful via GraphQL.
- Delivered the merch store frontend: product pages with size selection, cart, checkout, payment success flow, and order history, plus eSIM, gift card, and trade-in pages.
- Created a Solana bridge app (@solana/web3.js) with wallet connection, transaction confirmation, and an OpenAI Assistants chat.
